

Understanding the Evolution of Users' Personal Information Management Practices

Manas Tungare

Advisor: Manuel Pérez Quiñones

Research Area Overview

Human Computer Interaction

Personal Information Management

Information kept for
personal use.
E.g. files, documents.

Information about a person
kept by and under the control
of others.
E.g. health information.

Information experienced by
a person but outside her
control.
E.g. books, websites browsed.

Information directed to a
person.
E.g. email, IM.

By the way, has anybody
seen Al recently?

**“Cut off” your files—
before they cut *you* off!**

Information is Fragmented Across Devices

Information is Fragmented Across Collections

Research is fragmented

Why study PIM?

- Everybody does PIM
- Tools are not sufficient
 - A deeper understanding of personal information is needed
 - Custom strategies and workflows
- Approaches: browsing versus searching
[Teevan 2004]
- Personalities: filers versus pilers
[Malone 1983]

Studying PIM

- PIM is highly individualized
- People develop strategies to manage PI
- PIM strategies evolve over time
 - Transitions in life; new devices & tools
- PIM is highly contextual
 - Hence difficult to study

Study I: PIM & Multiple Devices

- How do devices affect information flows?
- Inter-relationships between devices
 - Formation of groups of devices
- Attaining equilibrium in the information ecosystem
- Device failures

Study I: PIM & Multiple Devices

- Survey + Interviews
- What activities do you perform on each device?
- What data do you keep on each device?
- What pairs of devices do you keep synchronized?
- What failures have you encountered?

Study 2: Evolution of PIM

- Natural transitions in life
 - High school to college
 - Grad school to industry
- A disturbance is noted when environment changes.
- How is equilibrium achieved?

What we expect to learn

- Are changes in PIM all the same in all cases?
 - New devices
 - Device/workflow failures
 - Changes in work environment
- What parameters affect PIM practice adoption?

Analyzing survey data

- E.g. why do people use their address book on their phone, but not on their desktop?
- Hypothesis: Not all devices and not all collections are the same. Keeping, storing, organizing, & finding depend on type of data & device.
- Usage depends upon the combination of devices and collections, plus other factors.

Summary

- PIM is an interesting area in HCI where a deeper understanding would benefit lots of users.
- Open questions in PIM research include understanding how people use multiple devices for information management.
- Our studies will help answer these and design future devices and apps better.
